

Hero comparison at z = 60 mm: V0 vs ideal sequential vs realistic sequential

ideal-sequential difference to V0 is blank by construction (max $|\delta| = 0.00e+00$ of total power) and is therefore not shown as an empty panel.

Metrics are computed on native N=1536 arrays; SAS zoom is display sampling only.

route	corrV0	c60	c120	dark
V0_reference	1.0000	0.952	0.936	0.0008
ideal_sequential	1.0000	0.952	0.936	0.0008
realistic_sequen	0.9936	0.965	0.939	0.0009
