

Transverse evolution with physical context (large SAS-scaled focus crops)

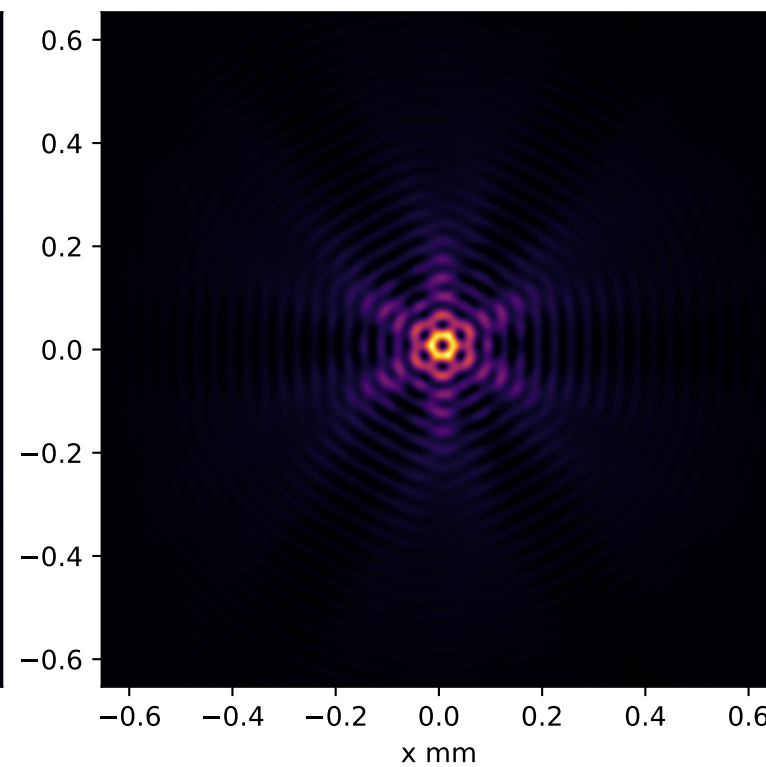

native crop z=0.1 mm
dx=9.77 μm (forming zone)

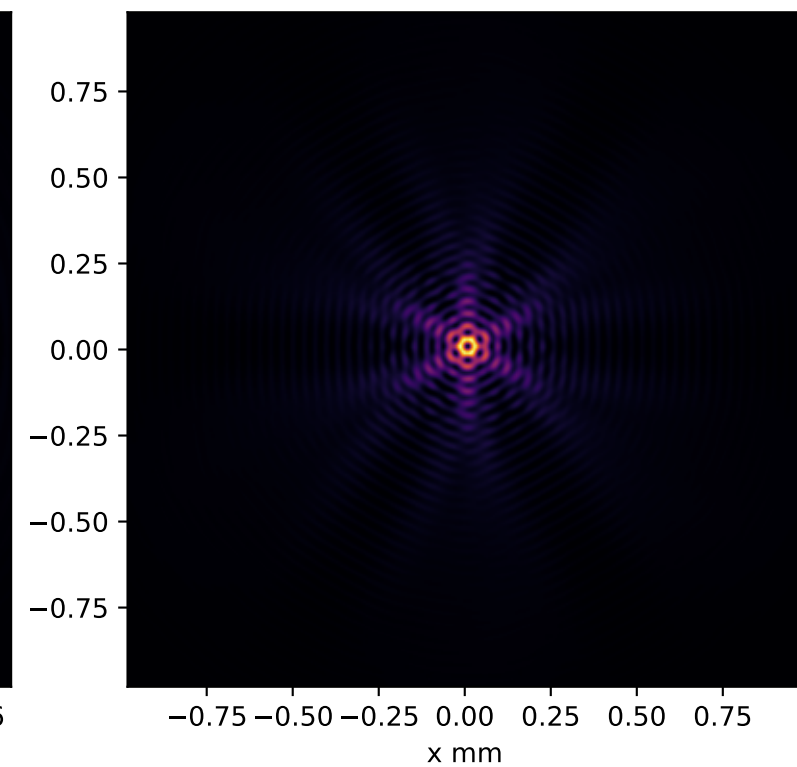

SAS zoom z=30 mm
dx=1.03 μm

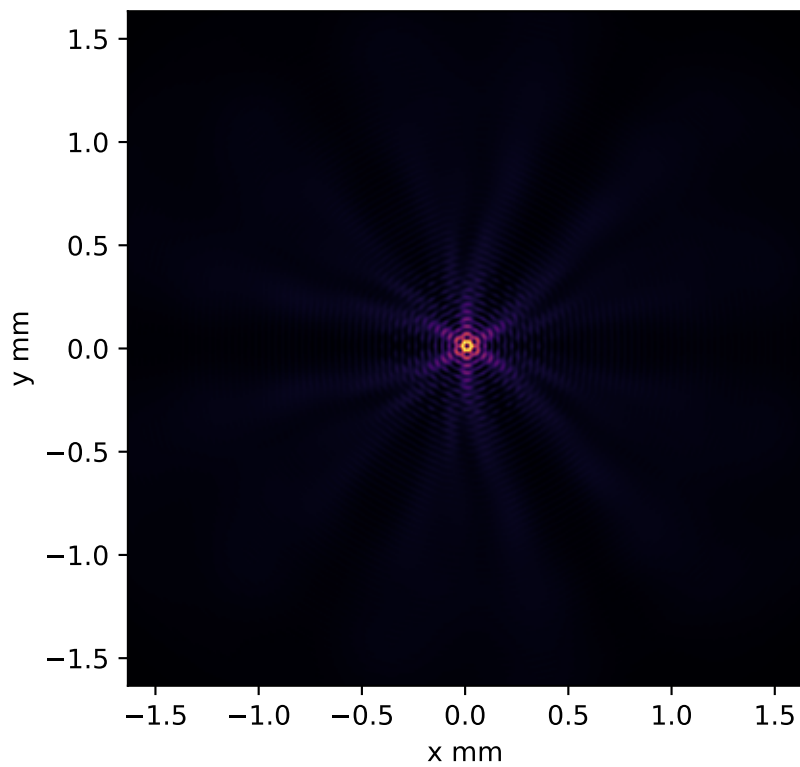

SAS zoom z=60 mm
dx=2.06 μm

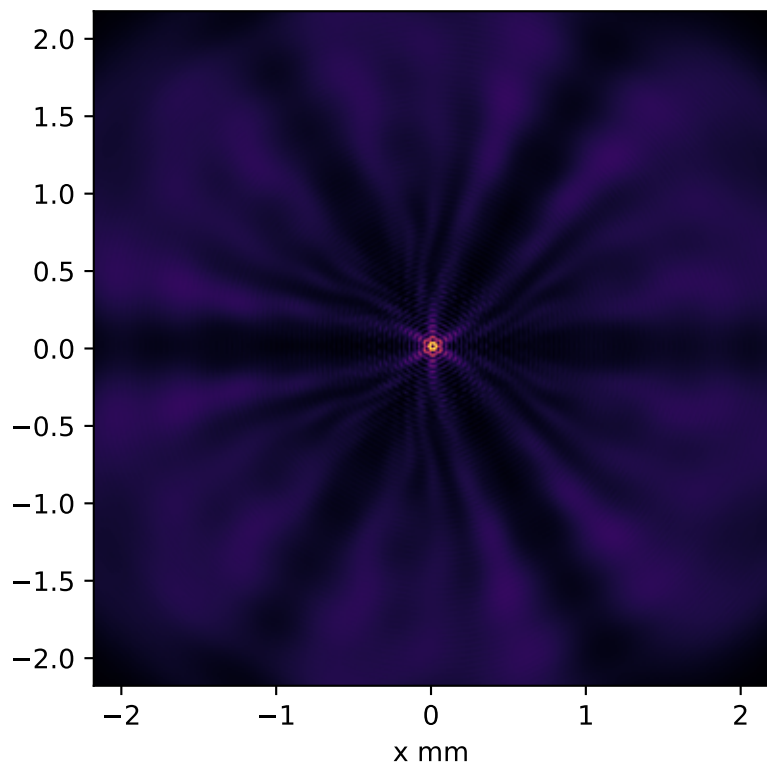

SAS zoom z=90 mm
dx=3.09 μm

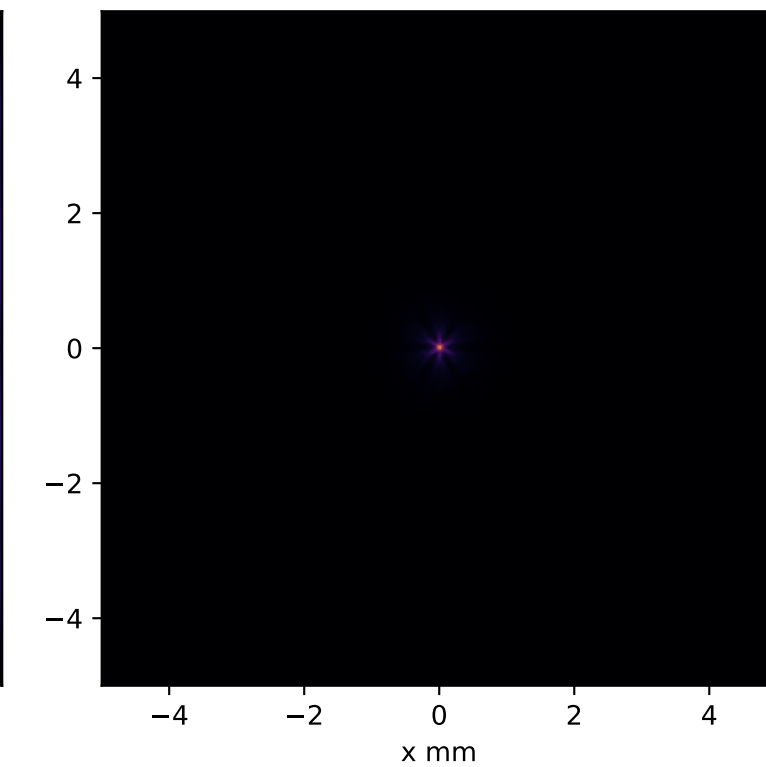

SAS zoom z=150 mm
dx=5.15 μm

SAS zoom z=200 mm
dx=6.86 μm

full 10 mm physical context
at z=60 mm

realistic sequential route (N=1024 native).
SAS zooms are display sampling only;
all metrics remain on native arrays.
z=0.1 mm shows the forming zone before
the non-diffracting region develops.
